A SEA CHANGE

AquaCote Foul release coatings offer a number of benefits over traditional antifoul solutions including: improved fuel efficiency, reduced Co2 emissions, no leaching of chemicals and an eco-friendly way to protect your boat.

AquaCote's mission is to deliver a market leading foul release system that doesn't harm marine life. Our pursuit for 'the best' has taken us around the globe, to every ocean and all marine conditions. It's also kept us chained to our lab desk, developing and improving our range of foul release coatings to ensure customers benefit from the most effective boat coatings available.

AquaCote is easy to apply and it's long-lasting, giving you more time to enjoy your boat on the water, where it belongs.

Easy to Apply

With legislation imposing tighter controls to protect marine life, more and more boat owners and marinas are turning to foul release coatings to protect their boats.

Old antifoul solutions contain harmful biocides and toxins that kill marine life by leaching chemicals into the water over time.

Foul release coatings offer an alternative to antifoul solutions. They are cost-effective, improve performance, while making maintenance more manageable as foul can be literally wiped away.

Great Results

AquaCote can reduce your maintenance costs over-time and makes for much easier cleaning.

MORE KNOTS, LESS DRAG

AquaCote Hull will last for at least three years, providing a cost-effective way to protect your boat, while improving performance.

For a yacht or launch to run at its very best, the hull and running gear need to be clean and clear of foul.

While antifoul and foul release coatings will both help to achieve this, foul release offers an additional incentive - A super smooth layer that reduces drag in the water.

Aquacote has been tested around the world and consistently demonstrates how the super-smooth coating results in less drag, improving hull and engine performance throughout the season, when compared to traditional antifoul solutions.

You save fuel while gaining speed.

Antifoul release coatings use silicone and Fluoropolymer technologies to create a slick hydrophobic surface that marine life finds it difficult to attach to. This means any residue can literally be wiped off.

The most significant benefit of a foul release is its ability to offer protection from fouling for at least three years – something that traditional antifoul cannot do.

AquaCote is suitable for sailing yachts, motorboats and motorcruisers irrespective of hull material.

ENVIROMENTALLY FRIENDLY

AquaCote offers efficient protection while looking after marine wildlife.

Traditional antifoul manufacturers are being pressured to produce coatings that are environmentally friendly. After all, our wildlife and marine systems are very important to us all.

AquaCote provides lasting protection against fouling and unlike even the friendliest of antifoul solutions, does not leach chemicals, making it one of the most ecologically sound foul solutions on the market today.

Aquacote is as kind to marine life as it is to your boat. Foul release coatings are cleaner, safer and offer a better solution to micro and macro fouling control.

BOAT COATED: WINDY 37'

"In the warm waters of the Med, AquaCote seemed to do a better job of keeping my boat's hull crud-free than my usual antifouling paint.

I had my boat performance tested a week after the treatment and at 2,000rpm we were doing 11 knots, at 3,000 rpm 27.6 knots, and at 3,650 rpm 35 knots (top speed). We used the boat regularly until mid-July, when we left her berthed for 11 weeks. In mid-October we repeated the trial and at 2,000rpm got the same 11 knots, with only slight drop off at 3,000rpm to 25 knots."

BOAT COATED: MOODY ECLIPSE 33

"Just a quick update on the AquaCote foul release system that I applied in the spring on our Moody Eclipse 33. We have completed some 600 nautical miles in the boat this summer, the coating seems to be performing as predicted. I am experiencing some buildup of fouling as one would expect but found that simply by brushing the hull it is coming off. Even the barnacles are coming off easily when you rub your fingers over them they just fall off. Would not try that with conventional antifoul as you would end up with lacerated fingers. Also found after being in a rough sea that some of the accumulated fouling was falling off."

BOAT COATED: PRINCESS V52

"After only six months of use, I'm really impressed with the hull cote and the way it cleans up and the way the barnacles fall off with a scrape of the fingers. Nice and clean to use and lovely pristine finish ready to go back in the water."

KILL DRAG, AND NOTHING ELSE

AQUACOTE PROP

AquaCote Prop will deliver consistent results, whilst also reducing fuel consumption.

Available in: 1 Ltr total volume Kits

Colour: Turquoise

AQUACOTE HULL

If the boat owner keeps this coating clean, the vessel will remain streamlined for longer, keeping your speed up all season.

Available in: 1 Litre & 2.5 Litre Kits

Colours: Black, Sky Blue, Bright Red, Oxide Red, White, Aluminium

AQUACOTE RIB

AquaCote Rib keeps you streamlined throughout the season, saving you fuel while increasing your knots.

Available in: Standard Kit Size

Colours: Transparent
